Congratulations to Jose Caceres for being awarded a second year of funding for Kean University’s AIM High Academy Mathematics Program (NJAHA) by the New Jersey Commission on Higher Education. NJAHA is a three-week residential program that provides high-achieving high school students with exposure to college through an intensive summer experience.

The primary goal of the Kean NJAHA program is to increase academic performance in mathematics for a minimum of forty Hispanic/Latino high school rising seniors from the Perth Amboy school district and to motivate them to attend college.

The faculty presentations that are part of this year’s Research Days are a sample of the dynamic research and creative activity taking place across our campus. The presentations are scheduled throughout the day starting at 11:00 a.m. Each lasts 45 minutes and follows the class schedule. We encourage you to bring your classes to one or more of the faculty presentations. A detailed schedule of all the faculty presentations is available on the ORSP website.

Over 100 undergraduate and graduate students across all disciplines will present their research using poster displays and will be available throughout the session to discuss their project and answer questions. This year Research Days will include oral presentations by students. Student oral presentations last 15 minutes and are scheduled throughout the day in the STEM building.
